Can we please add to 5.17 in the note a reference to 448 of the Telecommunications Act to reinforce the 5.17 further.

to Appendix K can we please bring back the list of Registrars, Types of Licence with brief limitations and the list of endorsements.

Can the "should" in 5.5.2 be changed to a SHALL. The electrical industry are purposely using this as an escape clause from doing data correctly. and the training industry is using it as an excuse not to correctly use and introduce the correct standards for Industry expectations for readiness.

I head a committee of 9 TAFES in Victoria that are looking to improve delivery in the Data cabling space (mostly to apprentice electricians) and we are constantly meet with there is no need to cover the content based on the "Should" I am also on a PSO group for the UEEDV training unit revision to improve this situation but i am constantly being hit with this "Should" I know to meet the requirements of 5.5.1, 5.6.2 & 5.7 the referred standards need to be adhered to .

If i could have a contact to send further ideas t would be greatly appreciated - I know i missed the dates.
